

About SyTech

Who We Are

SyTech Solutions, Inc. is a leading document management technology company headquartered in Sacramento, California. We help our clients provide structure to previously unstructured data like paper, microfilm, microfiche, e-mail and legacy code. Founded in 2000, SyTech has built a solid reputation for outstanding quality and superior customer service. SyTech has worked extensively with California public and private organizations at all levels. Our clients include:

- California Department of Corrections
- California Department of Health Services
- California Department of Transportation
- California Department of Water Resources
- City and County of San Francisco
- County of Alameda
- Fidelity National Title
- Golden Hills Community Services District
- PG&E
- Tesoro Petroleum
- Stockton Unified School District

SyTech looks for ways to maximize our customer's limited resources. We find technology solutions that deliver simplicity, value, and freedom.

Our Unique Approach

SyTech looks for ways to maximize our customer's limited resources. We find technology solutions that deliver simplicity, value, and freedom.

Simplicity – We help our customers navigate through the document management process by finding simple solutions to solve defined needs. We avoid complexity and software under-utility which increase cost and end-user rejection.

Value – Minimize high up-front technology costs and long-term licensing costs. SyTech leverages existing Microsoft platforms or inexpensive technology to save money. We don't overlook capture requirements in order to generate immediate software revenue.

Freedom – Avoid proprietary solutions. Our job security is based on providing the ultimate in customer service, not proprietary technology that holds your electronic records hostage.

Our number one focus is to create long-term partnerships with each of our customers – one that ties SyTech to their success.
